Retractable Fabric Awnings  
*"Our Name Reflects Our Quality"*

Sit back... Relax... Unwind... Entertain...

...while protecting yourself and your family.

You always know what to look for... good taste and style are a part of your personality, as is your demand for absolute quality. Unaffected by short-lived trends, you always opt for the ultimate combination of perfect functionality and timeless design. Therefore, your awning is not only meant to offer generous shade; but also to be an attractive part of your home.

The innovative Perfecta awning was made for people like you! Its elegant design perfectly harmonizes with every house and at the same time underlines a demand for an elevated lifestyle. State-of-the-art technology and uncompromising quality guarantee the kind of standard that you rightfully expect from a top-of-the-line product.

There's no easier way to be shielded from the sun than with a Perfecta retractable awning. Extend your awning effortlessly from anywhere using the touch of a button or

automatically with a Somfy optional sensor, creating a room without walls. With a Perfecta awning, ultraviolet protection is only an instant away.

From your morning cup of coffee to a midday brunch or an evening cocktail, allow your retractable awning to create a relaxing sanctuary. Invite your friends for a summer dinner party, relax with a glass of iced tea or lemonade, or take a mid-afternoon nap in the comfort of your own backyard, remaining cool and comfortable under your new awning.

All Perfecta awnings are manufactured in the United States to the highest industry standards, with quality second to none. Our commitment to customer satisfaction allows you piece of mind to concentrate solely on enjoying yourself and the outdoors comfortably. We welcome the opportunity to serve you.

## The Final Touch

A stylish hood (optional) protects your Sunrise when it is retracted. The integrated drip rail avoids unnecessary soiling of the valance and preserves the beauty of the fabric even longer.

With Hood

## Designed to Last

Both elegant and convenient, the Perfecta Sunrise retractable awning blends state-of-the-art design with uncompromising quality. Each Perfecta Sunrise is custom built, making it available in any width with projections up to 13'1".

A well-devised construction system enables a Sunrise to be installed almost anywhere. The solid mounting brackets permit quick and easy installation, and the elegant shape of the awning perfectly matches every architectural style. This makes it our most popular unit!

o S u n s e t . . .

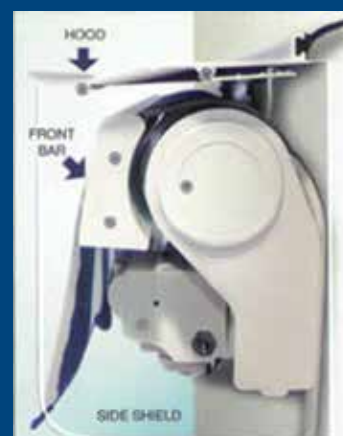

The Sunrise is built for safety, durability, and easy handling. It employs steel pins, triple-spring sheathed cables, and spring loaded arms, making it one of the sturdiest retractable awning models sold. State-of-the-art technology and extensive protection against corrosion guarantees a trouble-free operation for many, many years.

## Sleek & Compact Design

When not extended, a Perfecta retracts fully. Our closed profile, the smallest in the industry, allows the fabric to set back under the optional hood or your soffit for maximum fabric protection.

There is no winter maintenance or take down required. The awning is there where you want it, yet well protected when not in use. The entire unit also comes with a ten year warranty. It is truly built with quality and longevity in mind.

# The Right Awning for Every Application

## Little-Big

### Full Size Awnings in Limited Spaces

This awning was created to accommodate narrow installations with awnings having up to a 13' projection in areas as small as 8' wide. The patented crossing arms allow one arm to cross under the other, giving the awning the ability to still expand to its full size. This awning is best used in condominium-style housing. Rest assured that the Little-Big awning maintains the same quality and features as the Sunrise.

# Cut Down on Energy Costs

The benefits of awnings go far beyond aesthetic appeal. Awnings can enhance the look of an ordinary home or business through adding shape, dimension, and color. Awnings offer energy savings as well as protecting interior furnishing and carpets from fading caused by harsh UV rays. You can actually feel the energy saving benefits in a typical home. A fabric awning reduces heat gain by 55 to 65 percent.

## Toga

### Ultimate Fabric Protection

The Toga awning provides maximum projection for the fabric of your retractable awning. When fully retracted, the fabric is completely surrounded in a clam shell of powder-coated aluminum with only the valance remaining exposed. When the awning season is over, the valance can be easily removed and stored to prolong the life of the fabric. This awning is best used when a roof mount installation is required and is available in widths up to 23'. The elegant cylinder-design gives additional value to every house and at the same time ideally protects the fabric. This is the ultimate in fabric protection in retractable awnings!

## Easy Control

Automatically control your Perfecta awning using Somfy - the world's largest manufacturer of specialized tubular motors, controls and sensors.

## Retractable Valance

### Curtain Horizontal Sun and Provide Privacy

The Vario-Volant protects you from a low-setting sun. Lower the vertical extension of the awning's fabric cover at the front of the awning by using a simple gear mechanism. This makes it possible to curtain horizontal sun and provide privacy.

# 10 reasons to choose a Perfecta<sup>®</sup> awning

## STRENGTH AND DURABILITY

To prevent twisting, bowing, and weathering, Perfecta uses steel, not aluminum, for its galvanized roller tube and powder-coated square tube. This adds weight, strength, and longevity to your unit.

## VERSATILITY

Perfecta's well-devised mounting system enables you to install almost anywhere. A variety of strong mounting brackets permit a solid installation that match every architectural style.

## E-Z ADJUSTMENTS

Our optional E-Z Pitch adjustment package allows you to easily change the pitch of your awning whenever you choose.

## SUPERIOR FABRIC PROTECTION

Only Perfecta offers patented tilting arms which permit the curved front bar to fit snugly against the fabric on the roller tube. This allows the entire cloth cover to be totally protected under the hood for eliminating weather exposure. A clean cover looks better and lasts longer.

## STRONGER ARMS

Extra strong Perfecta arms are fitted with special, durable cables and three springs to lessen fabric sag. Smaller projection arms are fitted with three cables and two springs.

## VERTICAL FLEXIBILITY

The patented tilting installation bracket is the core piece of every Perfecta awning. When the awning extends, it sets the front bar to the preadjusted position; simultaneously it activates the automatic steel wind-lock. This limits the vertical lift of the arms to protect against windy conditions.

## SHEATHED CABLES

New plastic sheathed cables add longevity to the lateral arms used in all Perfecta products.

## HORIZONTAL FLEXIBILITY

Horizontal flexibility allows the force of the wind to be absorbed into the ball and socket style front bar connector. This allows for maximum strength through a total range of motion.

## GORTEX THREAD

Lock stitch sewing with GORTEX thread eliminates the worry of U.V. damage to the stitching of your awning fabric.

## WESTERN SUN SOLUTIONS

Vario-Volant, a vertical fabric drop at the front of the awning, solves many late afternoon western sun problems.
